

The Story Behind True Colloidal Silver

John Richardson, an electrical engineer and inventor, whose philosophy may best be described as “improvise and improve”, was diagnosed with an enlarged prostate in 1983. John asked a friend, who had done extensive research into natural medicines, what to take. She suggested colloidal silver, but told him if he did discover where to purchase some, it would be very expensive. “I found that my friend’s predictions were true. It was extremely rare and costly,” said John. “The problem of affordably producing a true colloidal silver intrigued me. The more information I found convinced me that colloidal silver should be readily available to the public.”

John started researching Dr. Alfred B. Searle’s notes, and used his published descriptions of final product as a guide. “**Colloidal silver concentrated at 500 ppm of the metal in colloidal form and not as a salt as a “clear, cherry red liquid.”** Dr. Searle wrote, “**Any additives destroy or inhibit the action of the silver. The solution must be pure silver and distilled water.”**”

John’s expertise as an electrical engineer however, was still not enough to discover the process to produce colloidal silver that met pre-1938 conditions. While studying one night, John felt that he was inspired by a spiritual source to use a very specific frequency and a specific voltage to cause current to pass through distilled water.

John took a sample to the FDA and presented it to them. They agreed that he had produced colloidal silver that met pre-1938 conditions. He received an FDA registration number, the only producer to receive such a number, and his product was grandfathered in to make pre-1938 claims.

The Natural Alternative Antibacterial

*“Silver in the **colloidal state** is highly germicidal, quite harmless to humans and absolutely non-toxic. Rather than in a chemical compound, the silver in a **colloidal state** may be applied in a much more concentrated form, with correspondingly better results. Staphylococcus, streptococcus organisms are killed in three or four minutes upon contact. In fact, there is no microbe known that is not killed by colloidal silver in six minutes or less at a dilution of as little as 5 parts per million, and there are no side effects whatsoever from the highest concentrations.”*

– **Dr. Henry Crooks, Bacteriologist**
A pioneer in colloidal chemistry

True Colloidal Silver

The Most Stable
and Effective Silver

The Silver Difference

SunForce Health & Organics offers the **original** "Continuous Process" Colloidal Silver, produced by John Richardson's Electrolysis machine.

The only Colloidal Silver to have received an FDA Registration number. 60943 March 11, 1994

Not a silver protein or ionic silver.

Questions to consider before buying any silver

- Does particle size matter?
- Should the solution be clear or have color?
- Should it be bottled in plastic or glass?
- Should it have a taste?

All of these are important; however, the first question you should ask is "Is it a colloid"?

What Is a Silver Colloid?

A Silver Colloid is an ultra-fine particle that may be suspended in a liquid or other medium, that does not dissolve in that liquid or other medium. In this form, which is elemental, not a compound, the silver is most readily assimilated. Before anything can be utilized by the body, it must be converted to a colloidal state.

What Is a Silver Ion?

A silver ion is an atom of silver that is missing one electron. A silver ion is soluble (dissolves in liquid) and highly reactive. Upon contact with compounds and or elements ions combine to create an ineffective and insoluble silver compound.

Seal of Approval

Products bearing this seal meet these criteria:

- Must be manufactured by the Electocolloidal Process
- Contain a large number of superfine particles of silver that are no bigger than 0.005-0.015 microns in diameter
- Have a pH of approximately 6.5
- Do not contain chemicals, proteins, artificial stabilizers, additives or food coloring
- Be naturally clear yellow or golden yellow color
- Be a solution relatively clear and free of sediment
- Have the consistency of water
- Meet the pre-1938 standards
- Exhibits a "cone effect" when tested with the Faraday-Tyndall effect

** True colloidal silver should also be tasteless and odorless.*

Colloidal Silver Criteria

SunForce has discovered a hidden treasure in northern Utah. Silver Colloidal Inc. has been producing its true colloidal silver for over 20 years. Now SunForce is bringing it to you.

Why is it important for the product you choose to meet these criteria?

More Stability: True colloidal silver does not require special treatment for storage Sunlight will not negatively affect the particles in suspension. A True colloid will never expire.

More Efficient: True colloidal silver is made up of colloids not ions. Colloids, as long as they fall under the ICSC (International Colloidal Silver Council) size guidelines, will pass through the stomach and intestines without combining with other elements and enter into the bloodstream. They are then transferred to the affected area.

More Effective: Our colloids have the optimal shape (round) and size of superfine particles. This allows for more surface area, which is available to contact microbes.

No Known Side Effects: No confirmed case of argyria has been reported in medical journals dating back over 100 years from using properly prepared colloidal silver.

**These statements have not been evaluated by the Food and Drug Administration.*
